PROJECTS

Watermark Removal System using Deep Learning

Python • TensorFlow • Keras • NumPy • OpenCV • U-Net Architecture

Developed a deep learning model based on Attention U-Net to automatically detect and remove visible, semi-transparent, and logo watermarks from images while preserving original content, textures, and fine details.

GitHub

Product Management System | Console-Based CRUD Application

Python • JSON File Handling • CRUD Operations

Developed a real-time console-based Product Management System in Python that allows users to efficiently perform CRUD operations — Add, View, Update, Delete, and Search products.
